Getting Your Parts Made

At Key Plastics we welcome new ideas and new product development.

If you have an idea and would like to progress it to the development stage, here are some pointers to get you started in the right direction:

- 1 Get some Computer Aided Design files (CAD) drawn-up.
All manufacturers with modern CNC equipment will require CAD files in order to make an assessment of your products shape and size and to do this the CAD files are essential.
- 2 Get financial support for the CAD files and/or product development / product design.
Enterprise Ireland support new business ideas under their Innovation Voucher Scheme with grants available of €5000 to assist with business opportunities.
Further information is available here:
<https://www.enterprise-ireland.com/en/research-innovation/companies/collaborate-with-companies-research-institutes/innovation-voucher.shortcut.html>
- 3 Once you have the CAD files in place, Key Plastics can gladly quote you to design and manufacture an injection mould and also provide a quotation for injection moulding of your new products in your required plastic material and colours.

To design and manufacture a typical injection Mould can cost anywhere from €5,000 to €50,000 and often higher depending on the complexity of the parts required.

Please note that our preferred CAD type are .stp files
